

Companies Hub

Merge Candidates, Job Roles, and the Hiring Pipeline into a single, unified Companies workspace — reducing navigation complexity while keeping all existing functionality intact.

PROJECT	PAGES MERGED	DATE	BACKEND IMPACT
Altzor HR Platform	4 → 1	April 2026	Zero Changes

What Changes in the Sidebar?

The sidebar shrinks from 6 items to 3. "Candidates", "Job Roles", and "Pipeline" are removed as standalone menu items — they now live inside the Companies page as context-aware tabs.

SUMMARY OF CHANGES

PAGE	STATUS	NEW LOCATION
Dashboard	KEPT	Sidebar — unchanged
Upload	KEPT	Sidebar — unchanged
Companies	PROMOTED	Becomes the unified hub
Job Roles	MERGED	Tab inside Company Detail
Candidates	MERGED	Tab inside Company Detail
Pipeline	MERGED	Tab inside Company Detail
Candidate Detail	KEPT	/candidates/:id — unchanged
Job Role Detail	KEPT	/job-roles/:id — unchanged

✓ Zero Backend Changes Required

All existing APIs (/candidates, /job-roles, /pipeline, /companies) stay the same. The merge is purely frontend — same endpoints, same data, same logic.

URL / ROUTING STRUCTURE

/companies	Companies Hub	Card grid + detail panel

The Unified Companies Page

Land on /companies → see all company cards. Click a card → a detail panel expands below with 3 tabs: Job Roles, Candidates, Pipeline. All data is auto-filtered to the selected company.

① **Company Cards (Top)**

Click a card to select it (blue border). The detail panel opens below showing real-time stats. Edit/delete icons on each card.

② **Tabbed Detail Panel**

Three tabs: **Job Roles** (filter Open/Closed + create), **Candidates** (search + filter by role), **Pipeline** (mini kanban). Each tab has its own action buttons.

③ **Deep Links Work**

"View →" still navigates to /candidates/id and /job-roles/id. Back button returns to /companies with the same company selected.

Candidates & Pipeline Tabs

The Candidates tab: searchable + filterable grid scoped to the company. The Pipeline tab: a condensed drag-and-drop kanban pre-filtered to this company with a "Full Screen" option.

Pipeline Tab Features

• Mini kanban showing all 7 stages (scroll)

• Drag-and-drop between columns

• "Full Screen" opens existing Pipeline page pre-filtered

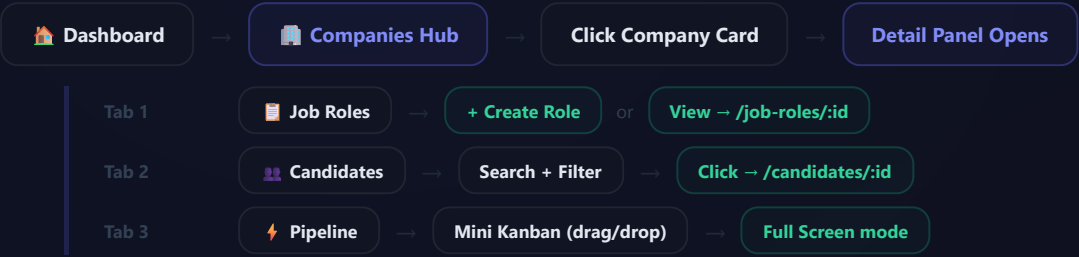

• Empty stages shown collapsed

• Real-time sync with main Pipeline

How Navigation Works

Companies is the entry point. Pick a company → drill into roles, candidates, or pipeline. All data is contextual and pre-filtered.

PRIMARY FLOW

UPLOAD FLOW (UNCHANGED)

Fewer Clicks

No more switching between 4 separate pages. Select a company and switch tabs — everything is 1 click away.

Context-Aware Filters

Candidates and Pipeline are auto-filtered to the selected company. No more manual dropdown filtering at each page.

Zero Backend Work

All API endpoints stay the same. This is a pure frontend reorganisation — same data, same logic, better UX.
